Installation

1. Copy the contents of the **upload** folder to the root of your site;
2. Open phpMyAdmin and import the file **sql_install_materialize_theme.ocmod** from the install/sql;
3. Open the Admin section of your site:

Open the «Extensions» —>
«Extensions».

Click the «Download» button and
install the files from the install/ocmod
folder and install/ocmod/language:

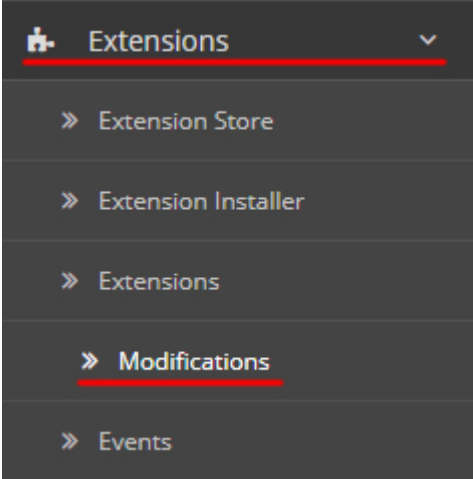

materialize_theme.ocmod.xml

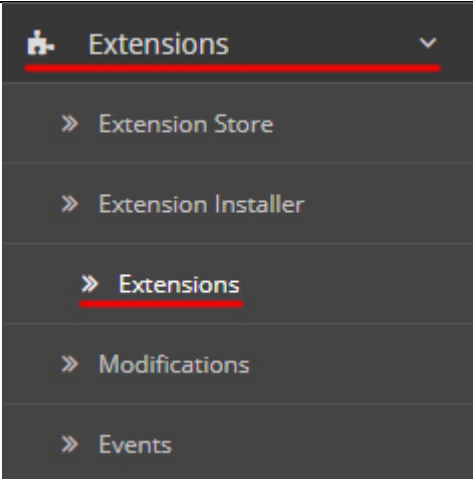

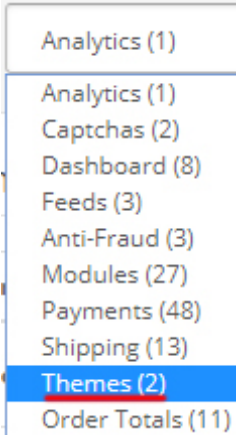

materialize_english.ocmod.xml

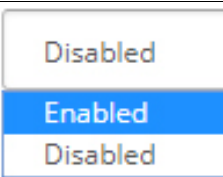

* Upload File ?

Upload

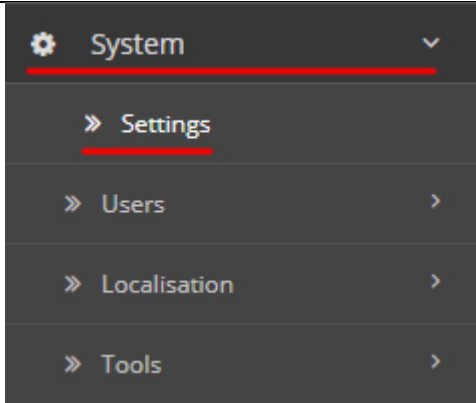

Clear

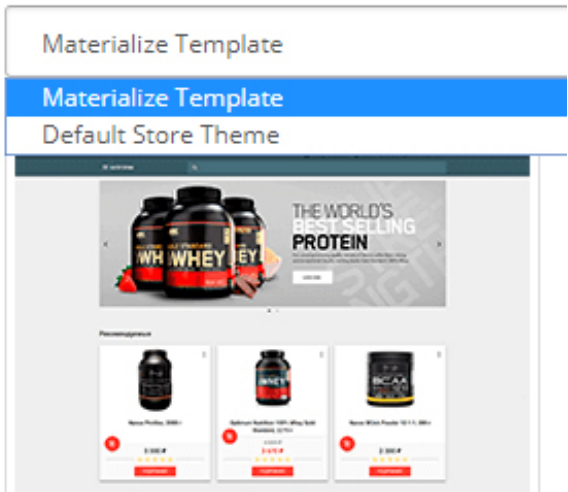

<p>In the same section of the «Extensions», open the «Modifications».</p> <p>In the upper right corner click the «Refresh» button .</p>	
--	---

<p>In the same section of the «Extensions», open the «Extensions».</p> <p>In the drop-down list, select «Themes» and click the «Install» button  next to the name of your site.</p> <p>After installation, click the «Edit» button .</p>	 
--	---

<p>On the theme page, change the status to «Enabled».</p>	
---	--

<p>On the same page in the upper right corner, click the «Save» button. .</p>	
--	--

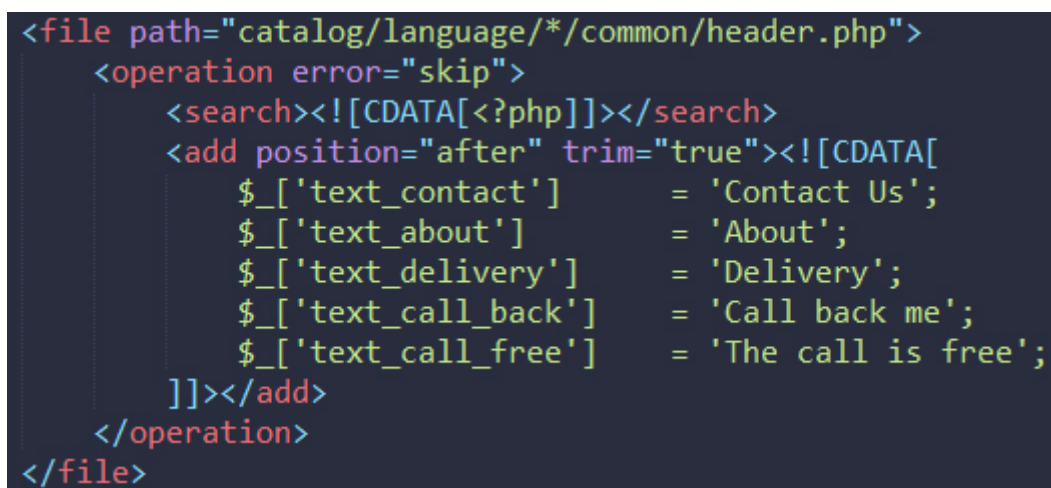

<p>Open «System» —> «Settings».</p> <p>Opposite your store, click the «Edit» button .</p>	
---	--

<p>In the «General» tab, next to «Theme» in the drop-down list, select «Materialize Template».</p> <p>On the same page in the upper right corner, click the «Save» button. .</p>	<p>Theme</p> 
---	---

Installation for languages other than English and Russian

1. Complete all steps from the installation instructions.
2. In the folder `install/ocmod/language` there is a file `materialize_your_language.ocmod.xml` — this is a workpiece for translation into the language you need.

How to translate

A screenshot of an XML file with a dark background and syntax-highlighted text. The code is as follows:

```
<file path="catalog/language/*/common/header.php">
  <operation error="skip">
    <search><![CDATA[<?php]]></search>
    <add position="after" trim="true"><![CDATA[
      $_['text_contact']      = 'Contact Us';
      $_['text_about']        = 'About';
      $_['text_delivery']     = 'Delivery';
      $_['text_call_back']    = 'Call back me';
      $_['text_call_free']    = 'The call is free';
    ]]></add>
  </operation>
</file>
```

Figure 1. An example of the text that needs to be translated.

1. The screenshot shows a typical construction of the workpiece file. In each line `catalog/language/*/` — it is necessary `*` to replace with the code of your language. For example, in the English file this is `en-gb` so all the lines have the form `<file path="catalog/language/*/common/header.php">`. For convenience, in your text editor use the function of multiple replacement, for example, to find: `/*/` replace everything with `/en-gb/`.
2. Opposite the text variables after the character is equal in quotation marks the text to be translated. Keeping this construction, translate everything that is in quotes to your language.

Order a translation from the theme developer

To order a translation for your language, provide a link to download your language files from the developer's site, or from the marketplace on the site [opencart.com](https://www.opencart.com) (the translate is free).

Please send the link through the contact information at the end of the documentation.

General recommendations for setting up a store with the Materialize template

Edit Setting: Store

- Store address: enter the full address of your store, as it is registered on an electronic map. Example: Moscow, 1-st Aeroportovskaya street, 6;
- Running time: every new time period start with a red line;
- E-mail: specify one e-mail address for working with clients (this address is displayed in the header of the site);
- Phone: specify, starting with the country code. Example: +7 (800) 555 35 35.

Edit Setting: Image

Icon (favicon) - use an image with a **minimum** size of 256x256 pixels.

Recommended icon format: **.png** (it is allowed .jpg, .jpeg, .gif, .ico).

Add Products

Product description

Here, the nuances of the description of the product card through the source code will be considered . In general, all the code obeys the rules of the [Materialize](#) framework.

Headers include html header tags, starting with h2. After closing the </h2> tag, add the separating line with the html code <div class="divider"></div>. Example:

```
<h2>Обновления iPhone 7 Plus</h2>
<div class="divider"></div>
```

Figure 2. Design of headings in product description.

Add the subheads to the h3 tags, according to the hierarchical logic. Paragraphs are enclosed in the <p></p>. Example:

```
<p>Представляем модель iPhone 7 Plus (MPR62RU/A), выполненную в красном
цвете (Red) с объемом встроенной памяти 256GB. Долгожданная седьмая версия
iPhone от Apple (Айфон 7 от Эппл) предлагает вам проработанный дизайн,
увеличенную скорость и плавность работы, превосходное качество съемки,
улучшенный звук и удобство пользования всеми функциями аппарата благодаря
новой iOS 10.</p>
```

Figure 3. Decoration of paragraphs in the description of goods.

To create a list with a green checkmark, add the ul list-check class to the ul. Example:

<pre><ul class="list-check"> соотношение аминокислот 4:1:1; гарантированное качество Ajinomoto®; усилен 2,5 гр. глутамина; защищает мышечную ткань от возможного повреждения; увеличивает выносливость и обеспечивает энергией; помогает увеличить задержку азота и усилить синтез белка, для наращивания мышечной массы; легко растворяется и имеет потрясающий вкус. </pre>	<ul style="list-style-type: none"> соотношение аминокислот 4:1:1; гарантированное качество Ajinomoto®; усилен 2,5 гр. глутамина; защищает мышечную ткань от возможного повреждения; увеличивает выносливость и обеспечивает энергией; помогает увеличить задержку азота и усилить синтез белка, для наращивания мышечной массы; легко растворяется и имеет потрясающий вкус.
---	---

Figure 4. Decoration of the list with a green checkmark.

To design an adaptive design, use the Materialize framework grid. [More on using the grid](#).

Image processing in description

The simplest design for images with a signature:

```
<figure>
  
  <figcaption class="center">Kamepa iPhone 7 Plus RED</figcaption>
</figure>
```

Figure 5. Decoration images in the product description.

[lazysizes](#)(lazyload) — lazy loading of images, to speed up page loading.

- Add the **photo-swipe** class to the **figure** tag;
- Add the **responsive-img** and **lazyload** class to the **img** tag;
- Attribute **src** replace with **data-src**;
- Write a new **src** attribute, specifying a value for it
 "data:image/gif;base64,R0lGODlhAQABAAAAACH5BAEKAAEALAAAAABAAEAA
 AICTAEAOw==" (while the image is loading, there will be an empty place instead
 of it). Example:

```
<figure class="photo-swipe">
  
  <figcaption class="center">Kamepa iPhone 7 Plus RED</figcaption>
</figure>
```

Figure 6. Lazy loading of images in the description of goods.

- To increase the image by click, use [PhotoSwipe](#). You will need two versions of the image: a smaller version will be downloaded first and the original version will be downloaded by click. The link to the original image is indicated in the href attribute of the <a> tag, and you **must** specify the size of the original image in the **data-size** attribute. A thumbnail is placed inside the <a> tag. Example:

```
<figure class="waves-effect waves-light">
  <a href="image/catalog/goods/bcaa/nanox/4-1-1/original/nanox-bcaa-4-1-1-apple-
  banner.jpg" data-size="1329x827">
    
  </a>
  <figcaption class="center">Nanox BCAA powder с яблочным вкусом</figcaption>
</figure>
```

Figure 7. Enlarged image by click.

- The **waves-effect** and **waves-light** classes for figure are specified to add a "wave" effect when clicking on an image.

Disabling the Cart Button

Go to the «Data tab and go down the page, opposite the « Button cart» in the drop-down list, select «Disabled». Save the changes.

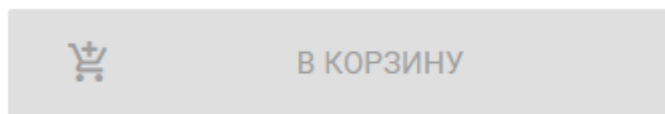

Figure 8. Disable the add to cart button.

Update template

1. Download the latest update from the repository on the github:

[Trydalccoholic/Opencart-Materialize](https://github.com/trydalccoholic/Opencart-Materialize). Click on "Clone or download" and select "Download ZIP".

Unpack the archive. Copy the contents of the folder "upload" to the root of your site with the replacement of files.

2. Go to the administrative part of your site. Open «Extensions», select «Modifications». Select all additions to the Materialize theme, click the

«Delete» button , then click the «Refresh» button ;

3. Open the «Extensions» —> «Extensions»;

4. Click the «Download» button and install the files from the install/ocmod folder and install/ocmod/language:

- a. materialize_theme.ocmod.xml
- b. materialize_english.ocmod.xml

5. In the same section of the «Extensions», open the «Modifications».

6. In the upper right corner click the «Refresh» button .

Uninstall a template

1. Go to the administrative part of your site. Open the «Extensions», выберите «Extensions». In the drop-down list, select «Themes» and click the «Edit» button . Opposite the «Theme Directory» select «default» and click «Save» ;
2. In the same section of the «Extensions», select «Modifications». Select all additions to the Materialize theme, click the «Delete» button , then click the «Refresh» button ;
3. Open **phpMyAdmin** and import the file **sql_uninstall_materialize_theme.ocmod** from the **install/sql** folder;
4. Delete the **materialize** folder from: **/catalog/view/theme**.

FAQ

1. Compatibility of modules or why some module does not work.

There is no guarantee that third-party modules will work with the OpenCart Materialize theme. First, this theme works on the Materialize framework, and most of the themes are based on the work of Bootstrap. In this regard, the modules are created taking into account the work on Bootstrap, rather than Materialize. Secondly, the theme is optimized to increase the speed of work, for example, javascript files are merged into one file and loaded only after the page is fully loaded. The developers of modules do, not provide this principle of scripts, as a rule.

2. Error «Undefined index: add_cart».

This error is because the file `sql_install_materialize_theme.ocmod.sql` was not correctly installed. Reasons why the file was not installed:

You changed the database prefix when installing OpenCart. The installation file is designed for the standard prefix "oc_", if you changed it, change the standard prefix to your own in the installation file, for example, `prefix_product`, `prefix_product_customtab`, `prefix_product_customtab_description`.

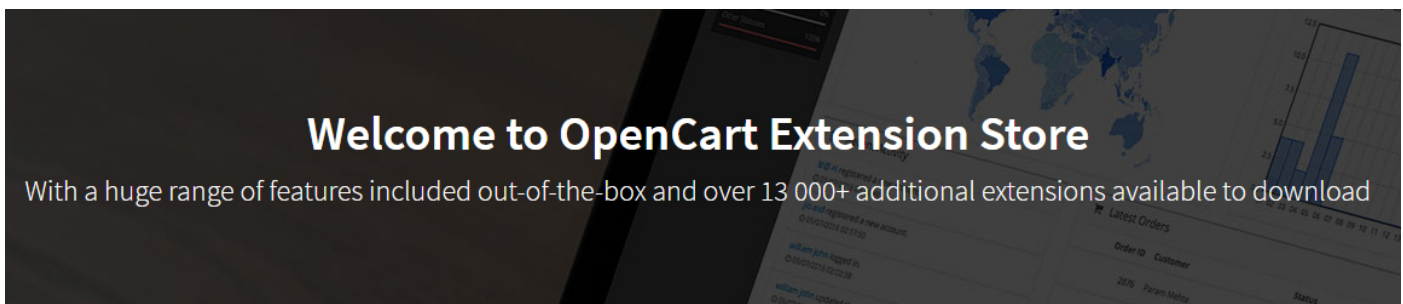

Another possible reason is the database configuration, which does not allow the use of sql file import. The solution to this problem was discussed [here](#).
